# **Creativity Collective**

## **Project Description**

### Mindscribe

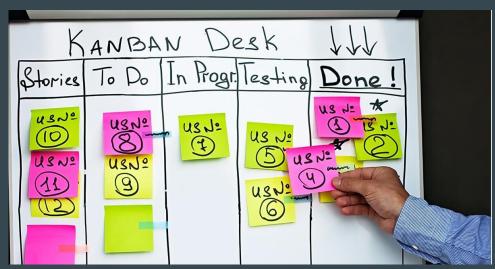

- Need for a notes app that makes reading easier
- Smart Journaling App
- Focus on Readability and Revisiting
  Notes
- Powered by the OpenAI ChatGPT 3.5
  API
- Automatic mood tracking
- Smart note formatting
- Smart Summarize

# **Tools and environment**

Tool	Purpose	Rating
GitHub	Project tracking	***
GitHub	Source control	***
PostgreSQL	Database	****
VSCode	IDE	****
Figma	Wireframes	***
NodeJS/Express	Server	****
Docker (local)	Deployment environment	****
Azure (cloud)	Deployment environment	***
ChatGPT	API	***
Bootstrap	UI framework	****

## Methodology

- Condensed version of Agile
  Development
- Weekly planning meeting with the team
- Weekly TA meeting
- Organized using a Kanban board on Github
- Created Epics for main features
- Divided epics into user stories which were divided among group members

Website (EJS) HTTP request / response

#### Nodejs application

- Express (APIs)
- OpenAI Node.js library (call chat GPT)
- pg-promise (Postgres db)
- Body-parser
- Express-session (session mgmt)
- Bcrypt (password encryption)
- Axios (outgoing HTTP requests)

Create, read, update, delete

Send text to summarize, format, or analyze mood

Receive response

ChatGPT API

### **Challenges**

### ChatGPT Integration

- Required lots of research and trial & error
- Limited calls to the API
- Responses can be unpredictable

### Github Merge Conflicts

- Features would break with each merge
- Needed manual fixing
- Code could be deleted with automatic merges without warning

### Teamwork

- Features relied on previous features being implemented
- Waited for one team member to finish a feature before others could start
